

20-2 OSPF Troubleshooting – Lab Exercise

In this lab you will troubleshoot the OSPF routing protocol.

Lab Topology

Load the Startup Configurations

Open the '20-2 OSPF Troubleshooting.pkt' file in Packet Tracer to load the lab.

OSPF Troubleshooting

- 1) OSPF has been configured on the network but the routers are not learning remote routes. The plan is to configure summarisation later but you need to fix basic OSPF first.

Your task is to troubleshoot the configuration and ensure that all routers have routes to every loopback and 10.x.x.x network.

There is a configuration error on each router. You will need to find and fix all errors before the network will work properly.

Note that some commands may be disabled during the CCNA exam so you should know the different troubleshooting commands.

You must not use the 'show running-configuration' command (or any derivative of it such as 'show run | section ospf') in this exercise.
