

23-2 DHCP Troubleshooting – Lab Exercise

In this lab you will troubleshoot DHCP.

Lab Topology

Load the Startup Configurations

Open the '23-2 DHCP Troubleshooting.pkt' file in Packet Tracer to load the lab.

DHCP Troubleshooting

- 1) The campus LAN has been configured but users in the 10.10.10.0/24 subnet are complaining of connectivity issues.

Your task is to troubleshoot the configuration and ensure that all PCs have connectivity to each other and to the Service Provider router.

R2 has been configured as a DHCP server for PCs in the 10.10.10.0/24 subnet.

The Service Provider router is an external device which you do not have any administrative access to. It has been preconfigured as a DHCP server which will give an IP address to the outside interface on R1. Use show commands to discover the IP address of the Service Provider router.
